

www.camdate.biz

CamDate is a Flash-based, enterprise Web application that supports live text and audio/video communication. Deployed internationally on sites ranging from online communities to intranets, our application suite reaches thousands of users and supports over 300,000 conversation a month in 12 countries.

CamDate is the next generation of Multi-User Chat software; beyond text messages, it provides rich communication through compressed streaming Audio and Video. **CamDate** lets your users interact easily in an elegant, multi-room chat environment. Utilizing Macromedia's new Flash Communication Server technology, this chat tool allows people in corporate, community, dating, or collaborative web environments to see and hear each other, increasing communication and understanding. The **CamDate** Application Suite is built from the ground up with the online-community business model in mind.

Highlights

Live, multi-user, multi-room audio / video / text chat; Flash front end: fast, stable, easy, system agnostic; Simple integration with existing user database; 2-way compressed audio/video streaming; Instant webcam/microphone detection; Default/user-created chat rooms; Private messaging; Online user list: gender icon, webcam present icon; Robust, style-enabled, real-time text chat: Bold/Italic Style, Color Palette, Animated Emoticons; Audio/Video Controls, Bandwidth Selector.

Features & Benefits

- Centralized control of stream size, providing scalable bandwidth usage
- Flash compression algorithms provide quality streams at low bandwidth
- Robust, style-enabled, real-time text chat: Bold/Italic Style, Color Palette, Animated Emoticons
- Seamless integration with your existing website and user database (pulls username, gender, banned variables right from your script/database)
- Integrates with any web scripting language (PHP, ASP, .NET, ColdFusion, XML, JSP, etc)
- Flash front end provides instantaneous, one-click operation for 95% of internet users (installed base of Flash)
- Interface can be branded or customized to meet unique site needs
- Audio video instant messaging provides cost effective differentiation for your site
- Platform agnostic, requires no Java

Improve Guest-to-Member Conversion

- Adding chat and audio/video communication to your website gives you the same advanced communication applications as the top 10 online dating destinations.
- Flash-based, CamDate Apps seamlessly extend your user-base across platforms from Windows to Mac to Linux.
- Creating a time-based currency within live communication systems encourages member upgrades.
- Allowing members to initiate chat sessions while restricting guests' receipt of those conversations provides a proactive method of converting guests into paying members.
